

Introducing the killer app that will change the way software licenses are managed

License Management by JP1/AIM solution examples

HITACHI
Inspire the Next

Greatly reduce software license management costs by managing precisely the number of licenses you need.

Example 1:

Accurately assess the number of remaining software licenses, as well as the number of used software licenses, to optimize management of the number of licenses owned.

Are you able to ascertain that you have a sufficient number of software licenses?
When you buy software licenses, do you end up purchasing too many?

• Tabulating the number of software licenses used

Improve your assessment of license usage, knowing when to purchase more licenses to compensate for a shortage, and when to transfer licenses to another division when excess licenses exist.

It sure is a relief to know exactly how many licenses we have and how many licenses are being used...

Software name	Software type	License category	Owned	Used	Available
Software1	Commercial	Install license	50	39	11
Software2	Commercial	Install license	5	4	1
Software3	Commercial	Install license	100	80	20
Software4	Commercial	Install license	50	40	10
Software5	Commercial	Install license	10	5	5

Few licenses remaining

See how many licenses are owned, used, and remaining, in a list view.

Example 2:

Take advantage of flexible software license transfers for inter-organizational changes and staff re-assignments.

Are you concerned about complications involved in transferring your software licenses?

• Batch transfer of software licenses

You can batch transfer software licenses, based on license management information.

Specify the number of licenses to transfer

IT Asset Administrator

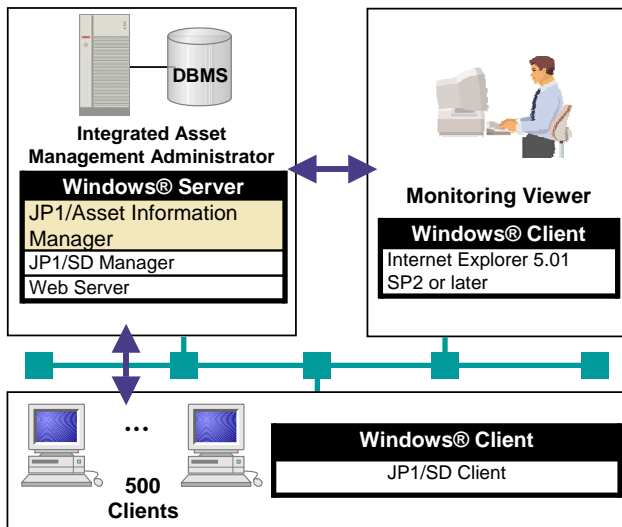

Batch transfer

Specify the destination division for the transfer

Batch transfer is complete

Tip : Batch transfers can be carried out easily for information about devices such as client PCs, using the same method.

System configuration example

Product name	Quantity
JP1/Asset Information Manager *1	1
