

Internal Control Supported by JP1

Changing the Configuration of a Business System (Changing Software)

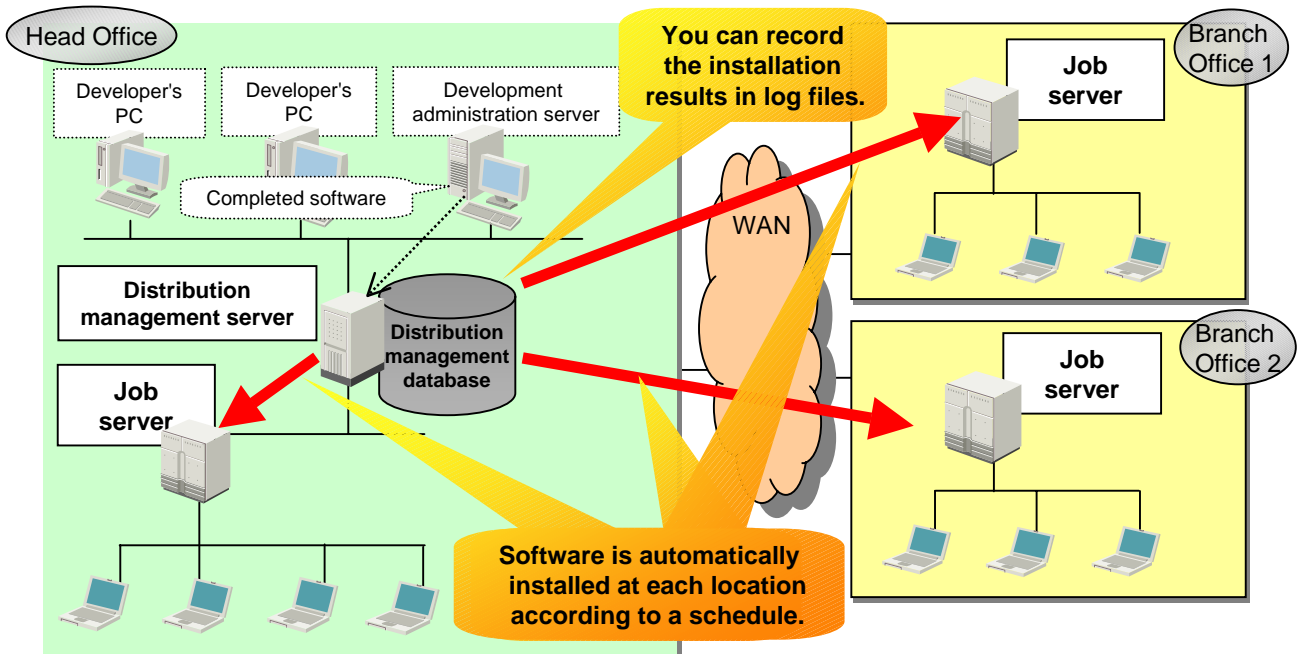

HITACHI
Inspire the Next

Potential Problems and Risks Associated with Changing the Configuration of a Business System (Changing Software)

With JP1, you can systematically and automatically update or install software at each location, and the results can be recorded in log files. Here, indicate that changes have been made correctly.

System Configuration Example

You can systematically and automatically update or install software at each location, and the results can be recorded in log files. In addition, server file operations from the client can be tracked and recorded.

Issue

- Control of software installation

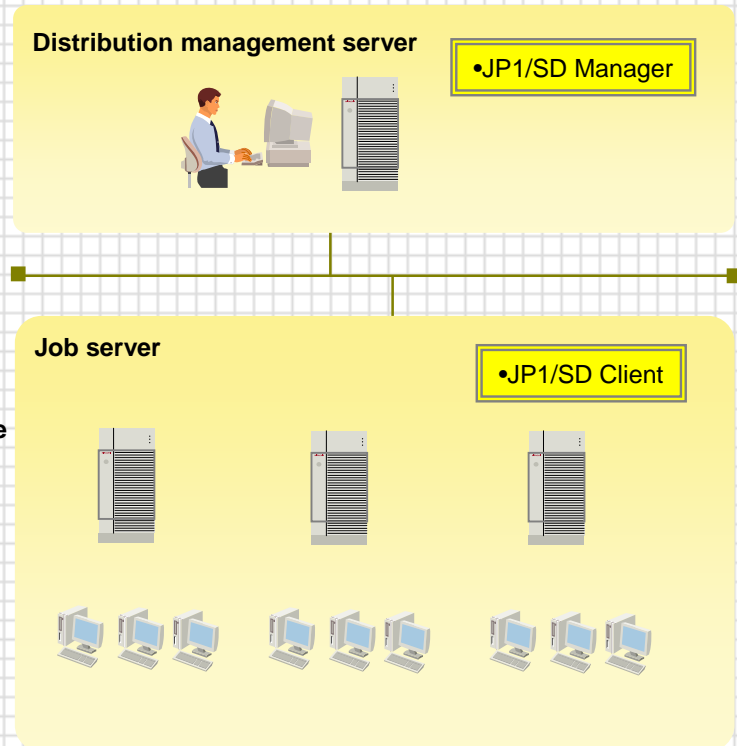

Solution functions

- Installation is performed systematically and automatically at each location.
- Installation results are recorded.

Results of introducing JP1

- The risk of operation errors related to software installation is reduced.
- JP1 records the results of software installation and indicates whether changes have been made correctly.

Configuration

| Product Nickname | Official Name |
|------------------|-----------------------------------|
