Update: March 14, 2005

HS05-001; Vulnerability of Buffer Overflow in LDAP Server

Solution for Hitachi Directory Server Version 2

The following vulnerability was found in Hitachi Directory Server Version 2:

- When receiving an invalid LDAP request, a remote attacker can exploit a buffer overflow.

Malicious users can attack this vulnerability, and shut down the LDAP server or execute arbitrary code.

Block the LDAP requests from outside with a firewall and so on, or apply a fixed version to your system. For details, see *Affected models, versions and fixed versions* below.
