Update: June 27, 2005

Vulnerabilities in Cross-site Scripting and Directory Traversal of Groupmax World Wide Web and Groupmax World Wide Web Desktop

- Affected products

Corrective actions	Product name	Platform	Last update
HS04-007-01	Groupmax World Wide Web Groupmax World Wide Web Desktop	Windows, HP-UX, HI-UX/WE2, Solaris	June 27, 2005

- Problem description

Vulnerabilities in cross-site scripting and directory traversal were found in the above products. These vulnerabilities allow a malicious third party to execute invalid script or access any HTML file on a Web server.

Revision history

- June 27, 2005: Corrective actions page is updated.
- January 26, 2005: Corrective actions page is updated.
- November 29, 2004: This page is released.

- Hitachi, Ltd. (hereinafter referred to as "Hitachi") tries to provide accurate information about security countermeasures. However, since information about security problems constantly changes, the contents of these Web pages are subject to change without prior notice. When referencing information, please confirm that you are referencing the latest information.
- The Web pages include information about products that are developed by non-Hitachi software developers. Vulnerability information about those products is based on the information provided or disclosed by those developers. Although Hitachi is careful about the accuracy and completeness of this information, the contents of the Web pages may change depending on the changes made by the developers.
- The Web pages are intended to provide vulnerability information only, and Hitachi shall not have any legal responsibility for the information contained in them. Hitachi shall not be liable for any consequences arising out of or in connection with the security countermeasures or other actions that you will take or have taken (or not taken) by yourself.

Update: June 27, 2005

**HS04-007;
Vulnerabilities in Cross-site Scripting and Directory Traversal of Groupmax World Wide Web and Groupmax World Wide Web Desktop**

Solution for Groupmax World Wide Web and Groupmax World Wide Web Desktop

Vulnerabilities in cross-site scripting and directory traversal were found in Groupmax World Wide Web and Groupmax World Wide Web Desktop (Gmax WWW).

[Influence]

- Cross-site scripting

When you log in GmaxWWW and enter HTML tags in the QUERY area of the GmaxWWW URL, cross-site scripting occurs, and if you click a URL that contains script, session hijacking may occur.

- Directory traversal

When you log in GmaxWWW and specify any directory name or file name in the template name area of the GmaxWWW URL, directory traversal occurs, and any HTML file on the Web server can be retrieved; however, the conditions below must be met to retrieve files on the Web server, so the risk of attackers retrieving files is reduced.

- You must have already logged in GmaxWWW
 - This vulnerability cannot be exploited before logging in GmaxWWW (from the Log in dialog box, etc.)
- The file extension is "html"
 - This vulnerability allows retrieval of files with the "html" extension. Files with the "htm" extension cannot be retrieved.
 - For the Windows versions, only the files in the drive on which GmaxWWW is installed can be retrieved.

For the fixed versions, contact your Hitachi support service representative.

[Provisional Workaround]

The following provisional workarounds exist for these vulnerabilities. Please use these workarounds until you apply the fixed version.

- Cross-site scripting

Be cautious when clicking the URL of GmaxWWW in mail text, etc.

- Directory traversal

Please choose one of the following workarounds:

- Use the file extension "htm" instead of "html" for files that you want to protect.
- For the Windows versions, do not store important HTML files in the drive on which GmaxWWW is installed.

Revision history

- June 27, 2005: The patches for the vulnerability in version 05-11-/J of model GMX5-WWWW and version 06-51 and 06-52 of model P-2446-7944 are now available.
- January 26, 2005: The patches for the vulnerability in versions 06-50-/C and 06-51-/C are now available.
- November 29, 2004: Information about vulnerabilities in cross-site scripting and directory traversal of Groupmax World Wide Web and Groupmax World Wide Web Desktop is released.
