Problem description

On January 23, 2006, Computer Associates announced on their Technical Support page (Japanese) that BrightStor ARCserve Backup r11.5, BrightStor ARCserve Backup r11.1, BrightStor ARCserve Backup Release 11, and BrightStor ARCserve Backup v9 have a vulnerability concerning buffer overflow. Malicious remote users can exploit the vulnerability of buffer overflow and execute arbitrary commands on backup servers that have the above products installed.

Update: March 31, 2006

HS06-003;

Vulnerability of Buffer Overflow in BrightStor ARCserve Backup iGateway Service

## Solutions for BrightStor ARCserve Backup

The following vulnerability was found in BrightStor ARCserve Backup r11.5, BrightStor ARCserve Backup r11.1, BrightStor ARCserve Backup Release 11, and BrightStor ARCserve Backup v9.

Malicious remote users can exploit the vulnerability of buffer overflow and execute arbitrary commands on backup servers that have products containing iGateway service installed (such as BrightStor ARCserve Backup). Please take one of the following corrective actions:

- Stop the iGateway service.
- Uninstall the iGateway service.
- Visit the Computer Associates website (Japanese) below and apply the corrective patches.

http://www.casupport.jp/resources/info/CA\_iGateway.htm

#### [Influence]

This vulnerability affects the following BrightStor ARCserve Backup products containing iGateway service:

- BrightStor ARCserve Backup r11.5 series
- BrightStor ARCserve Backup r11.1 series
- BrightStor ARCserve Backup Release 11 series
- BrightStor ARCserve Backup v9 series

Please note that the iGateway service is used to integrate BrightStor ARCserve Backup and other Computer Associates products, and BrightStor ARCserve Backup itself can work without the iGateway service. If the iGateway service is uninstalled from your system, this vulnerability does not arise.

#### [Affected models, versions, and fixed versions]
